

# Security-as-a-Service (SaaS)

Scope of Work

Security-as-a-Service (SaaS) is an outsourcing model for security management. Typically, Security-as-a-Service involves cyber security management provided in-house by an external organisation. Sourcing and retaining cyber security talent can be as challenging as managing cyber risk itself. In fact, 51% of companies report a severe shortage of cyber security skills.

What if you could access operational expertise without the hassle or expense of employing a full time, in house Cyber Security team?

Organisations need to protect their assets, but they also need to be profitable to stay in business. Protecting information assets has become a priority for organisations that need to meet compliance requirements or need to protect sensitive data. The challenge for these businesses' is implementing robust security practices while keeping investment and operational costs contained.

The cybersecurity threat landscape is rapidly expanding. Technology professionals are fending off attacks from all directions.

Security-as-a-Service will cover the following to ensure you are securing your organisation:

- Board Assurance
- Cyber Security Audits
- Security Architecture (By Design)
- Information Security Policy Framework
- Certification/Compliance needs
- Cyber Security Incident Response
- Vulnerability Management
- Endpoint Detection & Response (EDR)
- Cyber Security Helpdesk

Benefits of having Security-as-a-Service:

- Our cyber security team are at your disposal, they have the skillset to secure your business.
- You get to focus on what's more important for your organisation.
- Makes in-house management simpler.
- Save on costs employing an in-house Cyber Security team.
- Some industries have regulations in place that dictate how data is stored and transmitted so as to ensure its security and privacy.
